

USER SEGMENTATION & ENGAGEMENT ANALYSIS

The goal of this analysis was to understand how feature usage relates to user engagement and retention across the platform.

KPI OVERVIEW

AVG DAILY ACTIVE
USERS

136

AVG
TRANSFORMATIONS

48.7

MAX DAILY ACTIVE
USERS

248

AVG RETENTION

67%

KPI	DEFINITION
DAU	Distinct active users per day
Transformations	Total AI interactions per user per month
Retention	User active in month N and also active in month N+1

Weekends drove lower DAU, indicating professional/workflow usage patterns.

SEGMENTATION APPROACH

Segment	Definition
Single-feature users	Used only 1 platform feature
2-feature users	Used exactly 2 features
Multi-feature users	Used all 3 features

Segmentation was based on breadth of feature adoption to understand whether deeper product usage correlates with engagement and retention.

● Avg Days Online ● Avg Transformations

ENGAGEMENT FINDINGS

Multi-feature users consistently show substantially higher engagement across both usage frequency and transformation activity.

RETENTION FINDINGS

● Avg Retention %

Retention increases significantly as users adopt more platform features

This suggests that broader feature adoption is associated with stronger long-term platform stickiness.

RECOMMENDATIONS

01

Encourage cross-feature adoption

Users engaging with multiple features retain significantly better.

02

Improve onboarding for single-feature users

These users demonstrate lower engagement and retention.

03

Investigate workflows of highly engaged users

Understanding how power users adopt features may help replicate successful behavior patterns across broader users

FOLLOW UP ANALYSIS

- 01** Time-to-multi-feature adoption
- 02** Org-tier retention comparison
- 03** Funnel analysis for feature adoption
